

ABSTRACT OF THE DISCLOSURE

[0033] An airborne surveillance system for monitoring activity on an aircraft flight deck and in a passenger compartment of an aircraft or other form of mobile platform and relaying the images in real time to a remote monitoring location. The surveillance system also allows a party at the remote monitoring location to send signals to control movement of cameras located on the mobile platform and provides for the storage of the camera images by a recorder apparatus of the system, as well as at the remote monitoring location.
